

# ENV 797 - Time Series Analysis for Energy and Environment Applications | Spring 2026

## Assignment 1 - Due date 01/15/26

Sylvia Hipp

### Directions

Before making any edits to this file, please rename it such that it includes your first and last name (e.g., “LuanaLima\_TSA\_A01\_Sp26.Rmd”)

Once you have this renamed file open in RStudio, the first thing you will do is replace “author:” on line 3 with your name. Then you will start working through the assignment by **creating code and output** that answer each question. Be sure to use this assignment document. Your report should contain the answer to each question and any plots/tables you obtained (when applicable).

When you have completed the assignment, **Knit** the text and code into a single PDF file. Submit this pdf using Canvas.

### Questions

Q1. What are your previous experiences with time series analysis, R, and Git?

Answer: My only experience with time series analysis was from the time series module covered in ENV872 last semester. Outside of ENV872, I have R experience from undergraduate coursework and three years of work experience using R weekly. I also have some additional Git experience from the same job.

Q2. For this part we just want to see the path to your R project. No need to do anything. The output will be automatically generated once you knit your file.

Answer: This is my working directory:

```
getwd()  
  
## [1] "/home/guest/TSA_Sp26"
```

Q3. Copy and paste the link to your forked repository on Github. It should look like this: “[https://github.com/lmmlima/TSA\\_Sp26](https://github.com/lmmlima/TSA_Sp26)”

Answer: [https://github.com/sylviahipp/TSA\\_Sp26/](https://github.com/sylviahipp/TSA_Sp26/)
